Skills

- **Languages:** Python, Core Java, JavaScript, TypeScript
- **Backend & APIs:** Node.js, Express, Flask, REST APIs, PostgreSQL, Redis
- **ML & AI:** PyTorch, TensorFlow, Hugging Face, OpenCV, SegFormer
- **DevOps & Tools:** Docker, AWS (EC2), CI/CD, Git, Linux

Experience

HealifyAI | Co-Founder & Lead Engineer (Bootstrapped Venture)

Nov 2025 - Present

- Architected the entire health-tech platform using React, Flask, and Docker to deliver a seamless user experience.
- Fine-tuned **Qwen 2.5 7B** on clinical datasets, achieving a **training loss convergence of 0.54** (down from 2.26) to ensure high-accuracy medical summaries.
- Containerized the full stack and optimized the ML inference pipeline on AWS to handle heavy LLM workloads efficiently.

Codegnan Destination | Full-Stack Developer Intern

Feb 2024 - Apr 2024

- Developed a student performance dashboard from scratch using Node.js, Express, and PostgreSQL.
- Optimized complex SQL queries, which reduced API response latency by **30%** for production-like workloads.
- Designed and validated REST APIs with structured error handling, ensuring reliable data flow between frontend and backend.

Languify (Coincent) | Machine Learning Intern

Sep 2022 - Feb 2023

- Trained and evaluated an MNIST classification model using TensorFlow, gaining experience with model training, hyperparameter tuning, and evaluation workflows.
- Implemented data preprocessing and validation pipelines to ensure reproducible model training.

Projects

Ecom Chat | *Node.js, TypeScript, Docker, PostgreSQL, Redis*

Oct 2025

- Built backend services using Node.js and TypeScript with PostgreSQL for data persistence and Redis for caching.
- Improved **CI reliability to ~95%** by resolving dependency conflicts and stabilizing **Docker-based builds** across environments.
- Deployed services on **AWS EC2** using **Docker Compose** to enable reproducible, one-command releases consistently.
- Designed API contracts and service boundaries to support scalable feature additions and reliable backend communication.

Multi-Language NLP Engine | *Python, T5 Transformer, Flask*

Sep 2025

- **Fine-tuned T5-Base** on multi-lingual datasets to perform both abstractive summarization and translation, optimizing the model for cross-border content localization.
- **Exposed model inference** through **Flask REST APIs**, enabling faster experimentation cycles and smoother downstream integration with external services.

Road Scene Understanding with Segmentation | *PyTorch, SegFormer, OpenCV, IDD Dataset*

May 2025

- Fine-tuned **SegFormer** for semantic segmentation on Indian driving scenes, achieving **~50% mIoU** across diverse road conditions.
- Converted polygon annotations into **pixel-level segmentation masks**, creating **7k+ training** and **900+ validation** samples.
- Improved training throughput using **mixed-precision techniques** and automated evaluation pipelines, reducing iteration time.

OpenCV Card Detector — Real-time playing card detection and rank/suit recognition using OpenCV and template matching.

Publication

- Published "Summarization and Translation using NLP" in [IJRASET](#) (May 2024), reviewing transformer-based summarization techniques.

Education

Ballari Institute of Technology and Management

Dec 2020 – Jun 2024

B.E. in Artificial Intelligence and Machine Learning | **CGPA: 7.6**

Coursework

- Data Structures & Algorithms, Advanced Machine Learning, Operating Systems, Computer Networks, Cloud Computing
